2. 2 boxes for enclosures, tokens, kiosks, pavilions and money
3. 3 trays for cards + divider (separating expansion from base game if needed)
4. 1 box for universities tiles and partner zoo tiles
5. 1 box for game start components
6. 1 box for unused components (replaced by expansion components)
7. 4 card stands to use during the game
8. 1 card stands holder

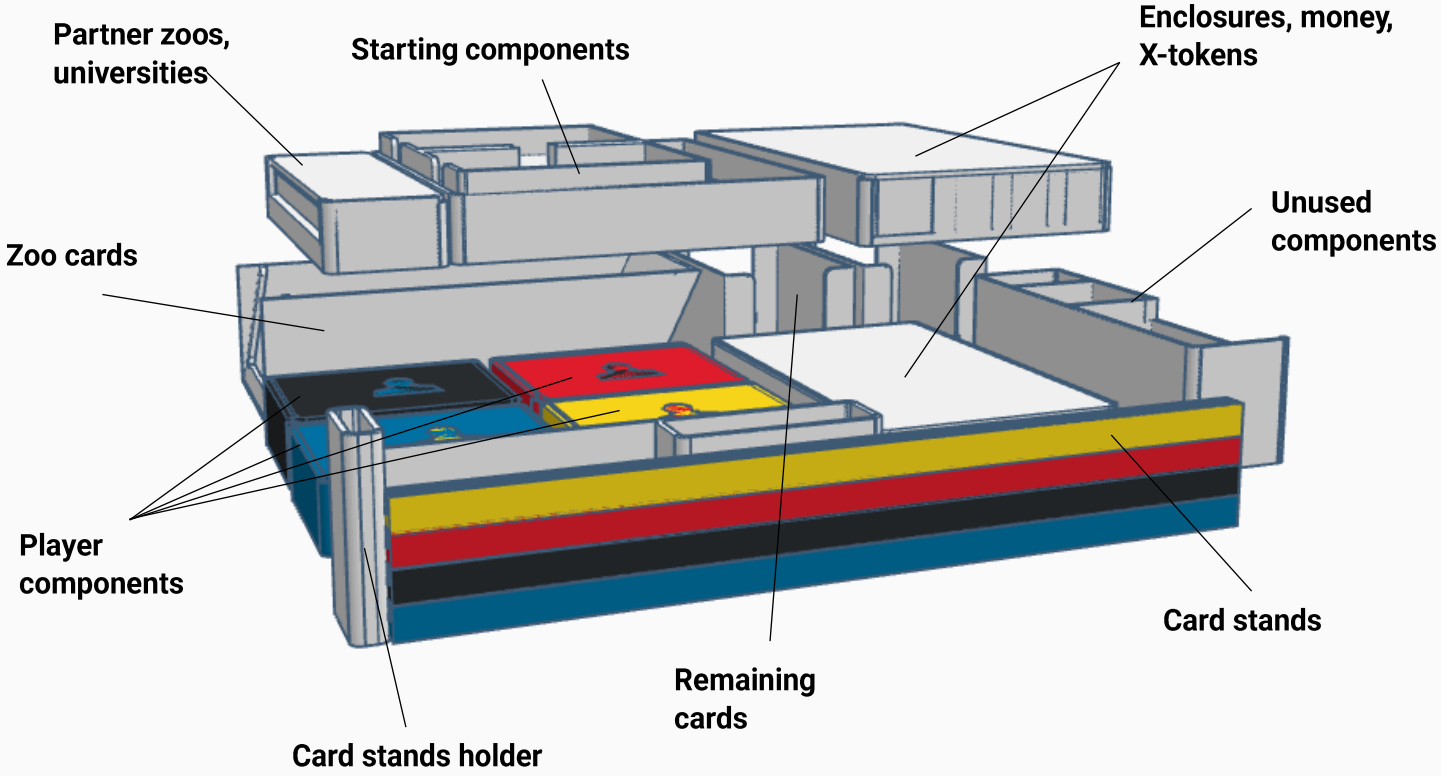

LAYOUT OF COMPONENTS IN THE GAME BOX

Game boards

Boxes and trays for game components

LAYOUT AND CONTENTS OF THE BOXES AND TRAYS

Player components boxes

- stores all components in a player color (from base game and expansion)
- 5 action cards
- starting money (25)
- special enclosure tiles (from base game and expansion)

Box for partner zoos and universities

- bottom part stores partner zoos
- middle part stores university tiles
- top part stores university tiles form the expansion

Boxes for enclosures, money tokens and x-tokens

- bottom layer of the box stores:
    - unique buildings tiles (from the base game and expansion)
- one of the top trays stores money tokens, kiosks, pavilions, constrictor and venom tokens. Middle round part stores x-tokens and break token
- second one stores standard enclosures
- there are two almost same boxes – one for each part of the game table

Box for start of game components

- top tray stores base conservation cards and final scoring cards
- bottom of the box stores bonus tiles and solo play tile

Box for unused components

- if you own the expansion, this box stores components, which were replaced by expansion components (zoo cards, player tokens and counters, bonus tiles). Cards can be alternatively stored in one ot the extra card trays (see on the next page)

Trays for zoo cards

- main tray stores zoo cards from base game and expansion. You can separate marine worlds expansion cards with a divider
- during the course of the game can be placed vertically on a game board and used to draw cards directly from it
- two smaller trays serve dual purpose.
    - If your cards are not sleeved, main card tray is too big for card storage. Use two smaller ones instead
    - If your cards are sleeved and you own the expansion, one of the boxes can store original action cards and the other will stay empty

In addition to card tray, special card stand can be attached to the player box underside and used to display zoo/bonus cards (instead of holding them in your hand, or on the game table. Each card stand has two grooves to hold cards slightly inclined. See example on picture above.

Game trays are stored parallel to longer side of the game box using custom holder.

Layout of boxes and trays in the game box. Box for start of game components is below player boxes. Player mats are placed on top of player boxes and enclosure boxes. This part is lower than the card trays for this purpose. You can store in this place also additional player mats from small expansions (Zoo Map Pack 1 and Zoo Map Pack 2).

Game and expansion can be stored in original game box without box lift and can be stored vertically, if tightly closed.
